

Dataset Name	Dataset Description	Column Names	Column Descriptions
carbon_prices_daily	Daily prices for EU ETS, California, RGGI, UK ETS, China ETS	date	The specific trading/observation date for the carbon price. It is recorded in YYYY-MM-DD format.
		Year	The calendar year extracted from the date column. This can be used for yearly aggregation and trend analysis.
		market	Identifies the carbon-pricing market or emissions trading system (ETS) associated with the observation. For example, EU_ETS represents the European Union Emissions Trading System.
		currency	Indicates the currency in which the carbon price is denominated, such as EUR for euros.
		price	The carbon allowance price recorded for the corresponding market and date, expressed in the currency specified by the currency column.
climate_events	Major climate/weather/policy events with severity scores	event_id	Unique ID
		date	Date of the event
		year	Year of the event
		month	Month of the event
		region	Geographic scope
		event_type	Label that provides the specific, granular classification of the climate or natural event.L
		severity_score	1-10 ordinal
		description	One-line description
		is_policy	Is it a government or regulatory action?
		is_extreme_weather	Is it an unusual weather event?
co2_emissions_yearly	50 countries × 27 years: total emissions, per capita, intensity	is_disaster	Did it cause major damage or loss of life?
		year	Years between 2000-2026
		country	The name of the country for which the energy-mix data is provided.
		iso3	The three-letter ISO 3166-1 alpha-3 country code used to uniquely identify the country. For example, CHN represents China.
		region	The geographical region in which the country is located, such as Asia, Europe, Africa, or North America.
		co2_emissions_mt	Total CO2 emissions in million tons
		population_millions	Population estimate
		co2_per_capita_t	Tons CO2 per person
		co2_intensity_kg_per_gdp_usd	Carbon intensity of GDP
energy_mix_yearly	50 countries × 27 years: 8 fuel shares (coal, oil, gas, nuclear, hydro, solar, wind, other)	year	The calendar year for which the country's energy mix is reported.
		country	The name of the country for which the energy-mix data is provided.
		iso3	The three-letter ISO 3166-1 alpha-3 country code used to uniquely identify the country. For example, CHN represents China.
		region	The geographical region in which the country is located, such as Asia, Europe, Africa, or North America.
		coal_pct	Percentage of the country's total energy mix supplied by coal during the given year.
		oil_pct	Percentage of the country's total energy mix supplied by oil during the given year.
		gas_pct	Percentage of the country's total energy mix supplied by natural gas during the given year.
		nuclear_pct	Percentage of the country's total energy mix supplied by nuclear energy during the given year.
		hydro_pct	Percentage of the country's total energy mix supplied by hydropower during the given year.
		solar_pct	Percentage of the country's total energy mix supplied by solar energy during the given year.
		wind_pct	Percentage of the country's total energy mix supplied by wind energy during the given year.
		other_renewables_pct	Percentage of the country's total energy mix supplied by renewable sources other than hydro, solar, and wind, such as geothermal and bioenergy.
		renewables_total_pct	Combined percentage of the energy mix supplied by renewable energy sources. This includes hydro, solar, wind, and other renewable sources.
		fossil_total_pct	Combined percentage of the energy mix supplied by fossil fuels, primarily coal, oil, and natural gas.
temperature_anomaly_monthly	Global + 7 regions × 316 months: temperature anomaly + CO2 ppm	year_month	Month - year period
		year	Year
		month	Month of the year
		region	The geographical region in which the country is located, such as Asia, Europe, Africa, or North America.
		temp_anomaly_c	Temperature anomaly in °C vs baseline
		temp_anomaly_baseline	Identifies the reference period used to calculate temperature anomalies across the dataset. (NASA GISS convention)

		co2_ppm	Atmospheric CO2 concentration (Global region only)
